

Value Creation Story

SWISH STEERING COMMITTEE MEMBER LISA LALLISS-SKOSBERG ON THE GROWTH OF THE ECOSYSTEM

Immediate Value

It's been incredible to watch the growth of the Idaho STEM Ecosystem since its inception in 2018. The work the STEM Action Center and the Idaho STEM Ecosystem teams have put in is amazing!

Potential Value

Being able to participate in working groups and in-person events has allowed us all to connect and work with like-minded individuals who want to blanket the students in the state with STEM opportunities to better their future and ours!

Applied Value

We look forward to the STEM Day at the Western Idaho Fair every year where we can meet new friends and introduce them to FIRST Robotics and the Statewide Convenings where we make new friends in industry.

Realized Value

I look forward to more opportunities to grow this endeavor and include more students in STEM opportunities.

Being able to participate in working groups and in-person events has allowed us all to connect and work with like-minded individuals who want to blanket the students in the state with STEM opportunities to better their future and ours!
