

Value Creation Story

ECOSYSTEM GRANT RECIPIENT NATALIE KULICK
ON SWISH END-OF-YEAR CELEBRATION EVENT

Immediate Value

I recently enjoyed an Ecosystem function which really made me think how fortunate I was to be a part of everything STEM. Thank you Ashley, ReBekha and Trisha. You gave us adult time to still be active and take tours and learn. We are part of a larger thing and it's nice.

Potential Value

Like in most rural school districts I lack a budget to figure out my way around technology pitfalls in my district. I was fortunate to be granted funds for my databot 2.0 revisited. It was fun to actually meet my kind contributors at this get together.

Applied Value

We really do have access to a village of science minded individuals in our various coalitions. I worked this year on getting familiar with the Databots while focusing on chemistry and environmental science concepts. It was a beautiful tool for kids to be able to ask questions and then quickly quantify some answers.

Realized Value

My students had a blast with our new devices. I now have more technology and get to gather empirical evidence to help my students learn about the world around them. I have to meet my students where they are and since I have ninth grade boys I need options. Next year I'm already considering how to expose my students to more.

I now have more technology and get to gather empirical evidence to help my students learn about the world around them.
